December 6, 2006

Board of Retirement City of Fresno Employees Retirement System 2828 Fresno Street, Suite 201 Fresno, California 93721-1327

Dear Board Members:

We are pleased to submit this Actuarial Valuation and Review as of June 30, 2006. It summarizes the actuarial data used in the valuation, establishes the funding requirements for fiscal 2007-2008 and analyzes the preceding year's experience.

The census and financial information were prepared by the City of Fresno Employees Retirement System. That assistance is gratefully acknowledged. The actuarial calculations were completed under the supervision of Andy Yeung, ASA, MAAA, Enrolled Actuary.

This actuarial valuation has been completed in accordance with generally accepted actuarial principles and practices. In our opinion, the combined operation of the assumptions and the methods applied in this valuation fairly represent past and anticipated future experience of the Retirement System and meet the parameters required by GASB Statement 25. To the best of our knowledge, the information supplied in this actuarial valuation is complete and accurate.

We look forward to reviewing this report at your next meeting and to answering any questions.

Sincerely,

THE SEGAL COMPANY

Jaul Crylo

Purpose

This report has been prepared by The Segal Company to present a valuation of the City of Fresno Employees Retirement System as of June 30, 2006. The valuation was performed to determine whether the assets and contributions are sufficient to provide the prescribed benefits. The contribution requirements presented in this report are based on:

- > The benefit provisions of the Retirement System, as administered by the Board of Retirement;
- > The characteristics of covered active members, DROP participants, inactive vested members, and retired members and beneficiaries as of June 30, 2006, provided by the Retirement System;
- > The assets of the System as of June 30, 2006, provided by the Retirement System;
- > Economic assumptions regarding future salary increases and investment earnings; and
- > Other actuarial assumptions, regarding employee terminations, retirement, death, etc. that the Board has adopted for the June 30, 2006 valuation.

The City of Fresno Employees Retirement System's basic financial goal is to establish contributions that fully fund the Retirement System's liabilities, and which, as a percentage of payroll, remain as level as possible for each generation of active members. Annual actuarial valuations measure the progress toward this goal, as well as test the adequacy of the contribution rates. As of June 30, 2006, there is an actuarial surplus (or prefunded actuarial accrued liability) as the System has valuation value of assets that are in excess of the actuarial accrued liability. The actuarial surplus in the Retirement System is used to reduce the City's contribution and to provide a Post Retirement Supplemental Benefit (PRSB). The allocation of surplus is provided in Appendix B of this report.

In preparing this valuation, we have employed generally accepted actuarial methods and assumptions to evaluate the Retirement System's assets, liabilities and future contribution requirements. Our calculations are based upon member data and financial information provided to us by the Retirement System's staff. This information has not been audited by us, but it has been reviewed and found to be consistent, both internally and with prior year's information.

In this valuation, we have continued to apply the same assumptions used in the June 30, 2005 actuarial valuation.

The rates calculated in this report may be adopted by the Board for the fiscal year that extends from July 1, 2007 through June 30, 2008.

Significant Issues in Valuation Year

The following key findings were the result of this actuarial valuation:

- In the June 30, 2005 valuation, the ratio of the valuation value of assets to actuarial accrued liabilities was 139.8%. In this June 30, 2006 valuation, the funding ratio has decreased slightly to 138.1%.
- > The Retirement System's prefunded actuarial accrued liability (PAAL) as of June 30, 2005 was \$225.3 million. In this year's valuation, the PAAL has increased to \$233.6 million.
- The Plan had a net actuarial experience gain of about \$5.3 million. A reconciliation of the System's PAAL is provided in Section 3, Exhibit H.
- The aggregate employer rate calculated in this valuation has remained at 0.00% of payroll. This is the net result of: (i) lower amount of credit from prepaid employer contributions, (ii) lower credit from City Surplus Reserve Account, (iii) higher than expected return on investments, (iv) higher than expected salary increases, (v) lower than expected retiree COLA increases, (vi) change in valuation programs and methods, and (vii) other experience gains or losses. A reconciliation of the Retirement System's aggregate employer rate is provided in Section 2, Subsection D (see Chart 14).
- The aggregate member rate calculated in this valuation has increased from 5.03% of payroll to 5.06% of payroll. The change in member rate is due to change in valuation programs and methods and from membership demographics. A reconciliation of the Retirement System's aggregate member rate is provided in Section 2, Subsection D (see Chart 15).
- In the June 30, 2004 valuation, the Board had made a change in the asset smoothing method to smooth all market returns that were in excess of the expected return on the valuation value of assets over a 5-year period. In this valuation, we have refined the smoothing method to smooth only the actual market returns that were in excess of the expected return on the market value of assets. In addition we have refined the methodology so that the sum of the valuation of assets, the unrecognized deferred return and the non-valuation assets is equal to the market value of assets as of June 30, 2006. This conforms to the version of this smoothing method that is more commonly used among California Public employees retirement systems.

As indicated in Section 2, Subsection B (see Chart 7) of this report, the total unrecognized investment gains as of June 30, 2006 is \$64.9 million. These investment gains will be recognized in the determination of the actuarial value of assets for funding purposes in the next few years, and will offset any investment losses that may occur after June 30, 2006. This implies that if the Retirement System earns the assumed net rate of investment return of 8.25% per year on a **market value** basis, it will result in investment gains on the actuarial value of assets in the next few years. So, if the actual market return is equal to the assumed 8.25% rate and all other actuarial assumptions are met, the contribution requirements would decrease in each of the next few years.

Impact of Future Experience on Contribution Rates

Future contribution requirements may differ from those determined in the valuation because of:

- 1) difference between actual experience and anticipated experience;
- 2) changes in actuarial assumptions or methods;
- 3) changes in statutory provisions; and
- 4) difference between the contribution rates determined by the valuation and those adopted by the Board.

Valuation value of assets	\$847,516	\$790,858	7.2%
Return on valuation value of assets	10.44%	9.84%	N/A

(1) Excludes supplemental benefits paid from PRSB.

(2) Includes terminated members due a refund of member contributions.

⁽³⁾ Before reflecting a change in the market value of assets as of June 30, 2005. After the change, the market value was \$872,565.

(4) June 30, 2005 payroll was actual payroll for plan year 2004/2005. June 30, 2006 payroll was projected payroll for plan year 2006/2007.

A. MEMBER DATA

The Actuarial Valuation and Review considers the number and demographic characteristics of covered members, including active members, vested terminated members, retired members and beneficiaries. This section presents a summary of significant statistical data on these member groups.

More detailed information for this valuation year and the preceding valuation can be found in Section 3, Exhibits A, B, and C.

A historical perspective of how the member population has changed over the past three valuations can be seen in this chart.

CHART 1

Member Population: 2004 – 2006

Year Ended June 30	Active Members ⁽¹⁾	Vested Terminated Members ⁽²⁾	Retired Members and Beneficiaries	Ratio of Non-Actives to Actives
2004	2,260	113	1,161	0.56
2005	2,286	127	1,202	0.58
2006	2,319	172	1,256	0.62

⁽¹⁾ Includes DROP members.

⁽²⁾ Includes terminated members due a refund of member contributions.

Non-DROP Active Members

Plan costs are affected by the age, years of service and compensation of active members. In this year's valuation, there were 2,097 non-DROP active members with an average age of 45.5 years, average years of service of 9.7 and average compensation of \$47,628. The 2,061 non-DROP active members in the prior valuation had an average age of 45.4 years, average service of 9.9 and average compensation of \$44,353.

Inactive Members

In this year's valuation, there were 172 members with a vested right to a deferred or immediate vested benefit or entitled to a return of their member contributions versus 127 in the prior valuation.

These graphs show a distribution of non-DROP active members by age and by years of service.

CHART 2

Distribution of Non-DROP Active Members by Age as of June 30, 2006

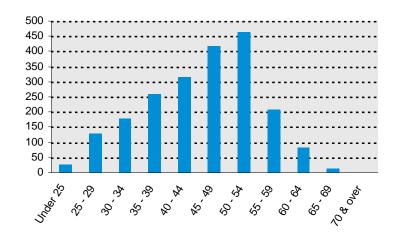

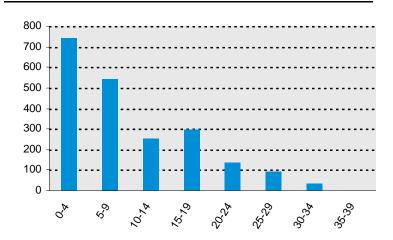

CHART 3

Distribution of Non-DROP Active Members by Years of Service as of June 30, 2006

DROP Active Members

In this year's valuation there were 222 DROP active members with an average age of 59.8 years, average years of service of 23.2, and average compensation of \$51,815. The 225 DROP active members in the prior valuation had an average age of 59.7 years, and average compensation of \$49,541.

Retired Members and Beneficiaries

As of June 30, 2006, 980 retired members and 276 beneficiaries were receiving total monthly benefits of \$2,172,617. For comparison, in the previous valuation, there were 941 retired members and 261 beneficiaries receiving monthly benefits of \$1,964,311.

These graphs show a distribution of the current retired members based on their monthly amount and age, by type of pension.

CHART 4

Distribution of Retired Members (Excl. Beneficiaries) by Type and by Monthly Amount as of June 30, 2006

B. FINANCIAL INFORMATION

Retirement plan funding anticipates that, over the long term, both contributions and net investment earnings (less investment fees and administrative expenses) will be needed to cover benefit payments.

Retirement plan assets change as a result of the net impact of these income and expense components. The adjustment toward market value shown in the chart is the "non-cash" earnings on investments implicitly included in the actuarial value of assets. Additional financial information, including a summary of these transactions for the valuation year, is presented in Section 3, Exhibits D and E.

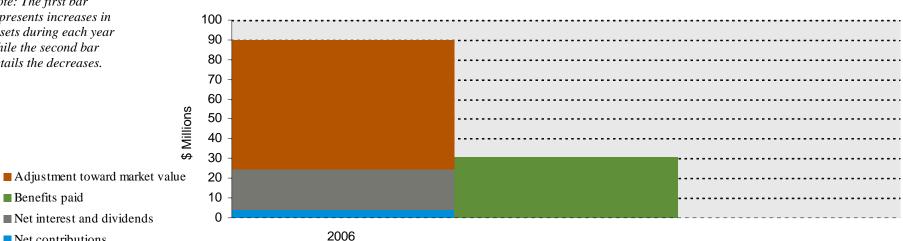

CHART 6

The chart depicts the components of changes in the actuarial value of assets over the last year. Note: The first bar represents increases in assets during each year while the second bar details the decreases.

Benefits paid

Net contributions

Comparison of Increases and Decreases in the Actuarial Value of Assets for Years Ended June 30, 2006

It is desirable to have level and predictable plan costs from one year to the next. For this reason, the Board of Retirement has approved an asset valuation method that gradually adjusts to market value. Under this valuation method, the full value of market fluctuations is not recognized in a single year and, as a result, the asset value and the plan costs are more stable. The amount of the adjustment to recognize market value is treated as income, which may be positive or negative. Realized and unrealized gains and losses are treated equally and, therefore, the sale of assets has no immediate effect on the actuarial value of assets.

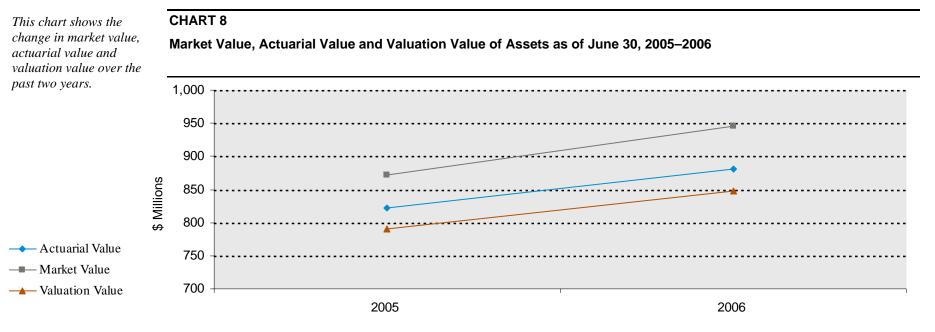

The determination of the Actuarial Value of Assets is provided on the following page.

The chart shows the determination of the actuarial value of assets as of the valuation date.

Plan Year Ending June 30	Total Actual Market Return	Expected Market Return*	Investment Gain/(Loss)	Deferred Factor	Deferred Return
2003	N/A	N/A	\$ 4,727,250	0.0	\$ 0
2004	N/A	N/A	68,905,645	0.4	27,562,258
2005	\$ 83,471,311	\$ 60,275,976	23,195,335	0.6	13,917,201
2006	100,177,718	70,874,321	29,303,398	0.8	23,442,718
Total Deferred Return					\$ 64,922,177
Net Market Value				945,868,848	
Actuarial Value of Assets (Item 2 – Item 1)				\$ 880,946,671	
. Non-Valuation Reserves	,				33,431,000
. Valuation Value of Assets	(Item 3 - Item 4)				\$ 847,515,671

* Based on expected return on market value of assets effective June 30, 2006.

The market value, actuarial value, and valuation value of assets are representations of the Retirement System's financial status. As investment gains and losses are gradually taken into account, the actuarial value of assets tracks the market value of assets, but with less volatility. The valuation value of assets is the actuarial value, excluding any non-valuation reserves. The valuation asset value is significant because the Retirement System's liabilities are compared to these assets to determine what portion, if any, remains unfunded. Amortization of the prefunded actuarial accrued liability is an important element in determining the contribution requirement.

*SEGAL

C. ACTUARIAL EXPERIENCE

To calculate the required contribution, assumptions are made about future events that affect the amount and timing of benefits to be paid and assets to be accumulated. Each year actual experience is measured against the assumptions. If overall experience is more favorable than anticipated (an actuarial gain), the contribution requirement will decrease from the previous year. On the other hand, the contribution requirement will increase if overall actuarial experience is less favorable than expected (an actuarial loss).

Taking account of experience gains or losses in one year without making a change in assumptions reflects the belief that the single year's experience was a short-term development and that, over the long term, experience will return to the original assumptions. For contribution requirements to remain stable, assumptions should approximate experience.

If assumptions are changed, the contribution requirement is adjusted to take into account a change in experience anticipated for all future years.

The total experience gain was \$5.3 million, including a gain of \$17.1 million from investments and a loss of \$11.8 million from all other sources. The net experience variation from individual sources other than investments was 1.9% of the actuarial accrued liability. A discussion of the major components of the actuarial experience is on the following pages.

This chart provides a summary of the actuarial experience during the past year.

CHART 9

Actuarial Experience for Year Ended June 30, 2006

1.	Net gain/(loss) from investments ⁽¹⁾	\$17,063,000
2.	Net gain/(loss) from other experience ⁽²⁾	<u>-11,799,000</u>
3.	Net experience gain/(loss): $(1) + (2)$	\$5,264,000

⁽¹⁾ Details in Chart 10.

⁽²⁾ See Section 3, Exhibit H.

Investment Rate of Return

CHART 10

A major component of projected asset growth is the assumed rate of return. The assumed return should represent the expected long-term rate of return, based on the Retirement System's investment policy. For valuation purposes, the assumed rate of return on the valuation value of assets was 8.25% (based on June 30, 2005 valuation). The actual rate of return on a valuation basis for the 2006 plan year was 10.44%. Since the actual return for the year was more than the assumed return, the Retirement System experienced an actuarial gain during the year ended June 30, 2006 with regard to its investments.

This chart shows the gain/(loss) due to

investment experience.

Investment Experience for Year Ended June 30, 2006 – Valuation Value and Actuarial Value of Assets

	Valuation Value	Actuarial Value
1. Actual return	\$81,292,494	\$85,932,037
2. Average value of assets	\$778,540,449	\$808,406,178
3. Actual rate of return: $(1) \div (2)$	10.44%	10.63%
4. Assumed rate of return	8.25%	8.25%
5. Expected return: $(2) \times (4)$	\$64,229,587	\$66,693,510
6. Actuarial gain/(loss): $(1) - (5)$	<u>\$17,062,907</u>	<u>\$19,238,527</u>

Because actuarial planning is long term, it is useful to see how the assumed investment rate of return has followed actual experience over time. The chart below shows the rate of return on an actuarial, valuation, and market basis for the last two years. Based on the assumptions adopted by the Board for the June 30, 2006 valuation, we have maintained the investment return assumption at 8.25%.

CHART 11

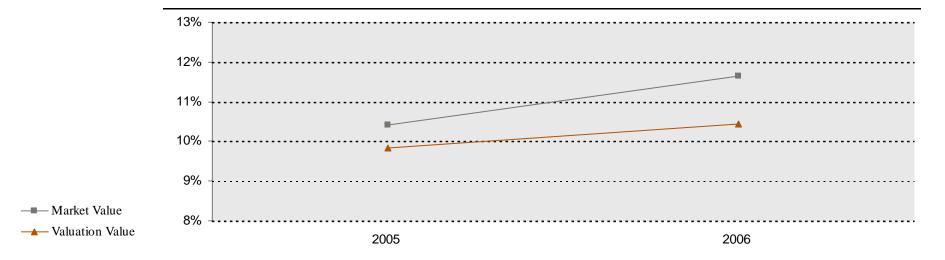

Investment Return – Actuarial Value, Valuation Value and Market Value: 2005 – 2006

	Valuatior Investmen		Actuaria Investmen		Market Investmen	
Year Ended June 30	Amount	Percent	Amount	Percent	Amount	Percent
2005	\$67,602,316	9.84%	N/A	N/A	\$83,471,311	10.42%
2006	81,292,494	10.44%	\$85,932,037	10.63%	100,177,718	11.66%

Subsection B described the actuarial asset valuation method that gradually takes into account fluctuations in the market value rate of return. The effect of this is to stabilize the actuarial rate of return, which contributes to leveling pension plan costs.

CHART 12

Market and Valuation Rates of Return for Years Ended June 30, 2005 - June 30, 2006

Other Experience

There are other differences between the expected and the actual experience that appear when the new valuation is compared with the projections from the previous valuation. These include:

- > actual turnover among the participants,
- > retirement experience (earlier or later than expected),
- > mortality (more or fewer deaths than expected),

- > the number of disability retirements, and
- > salary increases different than assumed.

The net loss from this other experience for the year ended June 30, 2006 amounted to \$11.8 million which is 1.9% of the actuarial accrued liability. See Exhibit H for a detailed development of the prefunded actuarial accrued liability.

D. EMPLOYER AND MEMBER CONTRIBUTIONS

Employer contributions consist of two components:

Normal Cost	The annual contribution rate that, if paid annually from a member's first year of membership through the year of retirement, would accumulate to the amount necessary to fully fund the member's retirement-related benefits. Accumulation includes annual crediting of interest at the assumed investment earning rate. The contribution rate is expressed as a level percentage of the member's compensation.
Contribution to the Unfunded	
Actuarial Accrued Liability (UAAL)	The annual contribution rate that, if paid annually over the UAAL amortization period, would accumulate to the amount necessary to fully fund the UAAL. Accumulation includes annual crediting of interest at the assumed investment earning rate. The contribution (or rate credit in the case of a prefunded actuarial accrued liability) is calculated to remain as a level percentage of future active member payroll (including payroll for new members as they enter the Retirement System) assuming a constant number of active members. In order to remain as a level percentage of payroll, amortization payments (credits) are scheduled to increase at the annual inflation rate of 4.25%.
Member Contributions	Provide for an average annuity at age 55 equal to 1/150 of FAS for each of the first 25 years of service and 1/300 for each year in excess of 25 (§2-1817).

CHART 13

(2) These are the average basic rates after applying the surplus to offset the COLA rates. See Section 4, Appendix A for the COLA and total rates before the surplus offset.

E. INFORMATION REQUIRED BY GASB

Governmental Accounting Standards Board (GASB) reporting information provides standardized information for comparative purposes of governmental pension plans. This information allows a reader of the financial statements to compare the funding status of one governmental plan to another on relatively equal terms.

Critical information to GASB is the historical comparison of the GASB required contributions to the actual contributions. This comparison demonstrates whether a plan is being funded on an actuarially sound basis and in accordance with the GASB funding requirements. Chart 16 below presents a graphical representation of this information for the Plan. The other critical piece of information regarding the Plan's financial status is the funded ratio. This ratio compares the actuarial value of assets to the actuarial accrued liabilities of the plan as calculated under GASB. High ratios indicate a well-funded plan with assets sufficient to pay most benefits. Lower ratios may indicate recent changes to benefit structures, funding of the plan below actuarial requirements, poor asset performance, or a variety of other changes.

The details regarding the calculations of these values and other GASB numbers may be found in Section 4, Exhibits I, II, and III.

EXHIBIT F

Actuarial Balance Sheet

An overview of your System's funding is given by an Actuarial Balance Sheet. In this approach, we first determine the amount and timing of all future payments that will be made by the System for current participants. We then discount these payments at the valuation interest rate to the date of the valuation, thereby determining their present value. We refer to this present value as the "liability" of the Plan. Second, we determine how this liability will be met. These actuarial "assets" include the net amount of assets already accumulated by the System, the present value of future member contributions, the present value of future employer normal cost contributions, and the present value of future employer amortization payments.

Actuarial Balance Sheet (Dollar Amounts in Thousands)

Assets	<u>Total</u>
1. Total valuation assets	\$847,516
2. Present value of future member normal cost	50,434
3. Present value of future employer normal cost	122,474
4. Unfunded /(prefunded) actuarial accrued liability	-233,603
5. Total current and future assets	\$786,821
Liabilities	
6. Present value of benefits already granted, excludes current active DROP	\$306,237
7. Present value of benefits for current active DROP	81,212
8. Present value of benefits to be granted	399,372
9. Total liabilities	\$786,821

7	Actual unfunded/(prefunded) actuarial accrued liability at end of year	-\$233,603

EXHIBIT I

Section 415 Limitations

Section 415 of the Internal Revenue Code (IRC) specifies the maximum benefits that may be paid to an individual from a defined benefit plan and the maximum amounts that may be allocated each year to an individual's account in a defined contribution plan.

A qualified pension plan may not pay benefits in excess of the Section 415 limits. The ultimate penalty for noncompliance is disqualification: active participants could be taxed on their vested benefits and the IRS may seek to tax the income earned on the plan's assets.

In particular, Section 415(b) of the IRC limits the maximum annual benefit payable at the Normal Retirement Age to a dollar indexed for inflation. That limit is \$175,000 for 2006 and \$180,000 for 2007. Normal Retirement Age for these purposes is age 62. These are the limits in simplified terms. They must generally be adjusted based on each participant's circumstances, for such things as age at retirement, form of benefits chosen and after tax contributions.

Benefits in excess of the limits may be paid through a qualified governmental excess plan that meets the requirements of Section 415(m).

Legal Counsel's review and interpretation of the law and regulations should be sought on any questions in this regard.

Contributions rates determined in this valuation have not been reduced for the Section 415 limitations. Actual limitations will result in gains as they occur.

EXHIBIT J

Definitions of Pension Terms

The following list defines certain technical terms for the convenience of the reader: **Assumptions or Actuarial Assumptions:** The estimates on which the cost of the Plan is calculated including: Investment return — the rate of investment yield that the Plan will earn over (a) the long-term future net, in this case, of investment and administrative expenses. Mortality rates — the death rates of employees and pensioners; life (b) expectancy is based on these rates; <u>Retirement rates</u> — the rate or probability of retirement at a given age; (c) (d) Turnover rates — the rates at which employees of various ages are expected to leave employment for reasons other than death, disability, or retirement. Normal Cost: The amount of contributions required to fund the level cost allocated to the current year of service. **Actuarial Accrued Liability** For Actives: The equivalent of the accumulated normal costs allocated to the years before the valuation date. Actuarial Accrued Liability The single sum value of lifetime benefits to existing pensioners. This sum takes For Pensioners: account of life expectancies appropriate to the ages of the pensioners and the interest that the sum is expected to earn before it is entirely paid out in benefits. **Unfunded** (Prefunded) Actuarial **Accrued Liability:** The extent to which the actuarial accrued liability of the Plan exceeds (or is exceeded by) the assets of the Plan. There are many approaches to paying off the unfunded or prefunded actuarial accrued liability, from meeting the interest accrual only to

amortizing it over a specific period of time.

Amortization of the Unfunded (Prefunded) Actuarial Accrued Liability:	Payments made over a period of years equal in value to the Plan's unfunded or prefunded actuarial accrued liability.
Investment Return:	The rate of earnings of the Plan from its investments, including interest, dividends and capital gain and loss adjustments, computed as a percentage of the average value of the fund. For actuarial purposes, the investment return often reflects a smoothing of the capital gains and losses to avoid significant swings in the value of assets from one year to the next.

Actuarial Value of Assets:		of Assets is determined by phasing in any difference between nd expected return on market value over 5 years.		
Valuation Value of Assets:	The Actuarial Value of Assets reduced by the value of the non-valuation reserves.			
Actuarial Cost Method:	c c	Actuarial Cost Method. Normal Cost and Actuarial Accrued d on an individual basis and are allocated by service.		

EXHIBIT V

Summary of Plan Provisions

This exhibit summarizes the major provisions of the Retirement System included in the valuation. It is not intended to be, nor should it be interpreted as, a complete statement of all plan provisions.

Membership Eligibility:	Permanent full-time employees except sworn Fire and Police personnel.			
Final Compensation for Benefit Determination:	Highest average consecutive thirty-six months of compensation earnable calculated using the rate of pay in effect at the time of the retirement (§2-1801).			
Service:	Years of service (Yrs).			
Service Retirement Eligibility:	Age 55 (age 50 in certain layoff situations) with 5 years of service (§2-1832).			

Service Retirement (Continued):

Benefit Formula Per Year of Service

2% times each of first 25 years of service plus 1% for any years of service in excess of 25, multiplied by the following factor at retirement age (§2-1833):

Age	Factor	Age	<u>Factor</u>
55	1.00	61	1.14
56	1.02	62	1.18
57	1.04	63	1.22
58	1.06	64	1.26
59	1.08	65	1.30
60	1.10	65+	Add 0.01 each quarter year after age 65

Deferred Retirement Option (**DROP**)

Eligibility	Same as service retirement.
Benefits under DROP	DROP benefits (calculated using age, service, and salary at the commencement date of participation in DROP) will be credited to a DROP account with interest at rates determined by the Board. Members will no longer be required to make member contributions. Members may participate in DROP for up to ten years (§2-1852).

dinary or Service Connector	ed Disability:
Eligibility	Ten years of service (§2-1837).
Benefit Formula	Greater of 1.8% * FAS * Yrs, 33.33% of FAS, or Service Retirement benefit (§2-1838).
-Retirement Death:	
All Members	
Eligibility	None.
Benefit	Refund of employee contributions with interest, plus one month of final compensation for each year of service, to a maximum of six month's compensation (§2-1829).
Vested Members:	
A1. Eligibility	At least five years of service but ineligible for Service Retirement at death (§2-1840.3).
B2. Benefit	50% of Service Retirement Benefit as if the member were age 55 based on years of service at death (§2-1840.3).
	or
A2. Eligibility	Eligible for Service Retirement
B2. Benefit	50% of Service Retirement Benefit based on benefit due on member's date of death (§2-1840.3).

SECTION 4:	Reporting Information for the City	y of Fresno Emplo	yees Retirement System
			,

Death After Retirement:	
<u>All Members</u>	
Service or	
Disability Retirement	50% of member's unmodified allowance continued to eligible spouse/domestic partner (§2-1840.1).
Withdrawal Benefits:	
Less than Five Years of Service	Refund of accumulated employee contributions with interest.
Five or More Years of Service	If contributions left on deposit, entitled to earned benefits commencing at any time after eligible to retire (§2-1827).
Post-retirement	
Cost-of-Living Benefits:	Future changes based on Consumer Price Index to a maximum of 5% per year (§2-1840.4).

Member Contributions:	Please refer to Appendix A for specific rates.
	Provide for an average annuity at age 55 equal to $1/150$ of FAS for each of the first 25 years of service and $1/300$ for each year in excess of 25 (§2-1817).
City Contributions:	The amortization period for Prefunded Actuarial Accrued Liability is an open non- declining 15-year period.
Post Retirement Supplemental Benefits (PRSB):	PRSB may be paid to retired DROP participants, eligible retirees, and beneficiaries (§2-1853). This benefit has been excluded from this valuation.

NOTE: The summary of major plan provisions is designed to outline principal plan benefits as interpreted for purposes of the actuarial valuation. If the Retirement System should find the plan summary not in accordance with the actual provisions, the Retirement System should alert the actuary so they can both be sure the proper provisions are valued.

Appendix A

Member Contribution Rates

Breakdown of member rate between basic and COLA calculated in the June 30, 2006 and June 30, 2005 valuation:

	June 30, 2006 Actuarial Valuation							Ju	ne 30, 2005 A	ctuarial Va	luation

Appendix B

Allocation of Actuarial Surplus

	June 30		
	2006	2005	
Surplus as of Date of Valuation (Table 1)	\$233,602,592	\$225,307,910	
Actuarial Surplus (Table 1)	172,211,284	168,752,929	
Distributable Actuarial Surplus as of date of valuation (Table 2)	15,393,069	14,724,537	
Allocation of Distributable Surplus as of Date of Valuation:			
Member COLA Contribution Offset (Table 3)	3,406,000	3,303,000	
City COLA Contribution Offset (Table 3)	3,406,000	3,303,000	
Additional City Allocation (Table 3)	5,720,713	5,412,358	
PRSB Allocation (Table 3)	<u>2,860,356</u>	2,706,179	
Total	\$15,393,069	\$14,724,537	
Allocation of Distributable Surplus as of Date of Next Valuation:			
Member COLA Contribution Offset (Table 3)	3,444,000	3,406,000	
City COLA Contribution Offset (Table 3)	3,444,000	3,406,000	
Additional City Allocation (Table 3)	5,561,556	5,193,016	

The Allocation of Distributable Actuarial Surplus is sufficient to:

- Provide for member and City COLA contribution requirements for the 2007-2008 fiscal year;

- Provide for a portion of the City's contribution requirement for the 2007-2008 fiscal year (Table 4) and;

- Provide a PRSB benefit of \$214.98 per month over the 2007 calendar year (Table 5).

Allocation of Actuarial Surplus

	June 30	
	2006	2005
Calculation of Actuarial Surplus		
(1) Actuarial Value of Assets	\$847,515,671	\$790,857,722
(2) Actuarial Accrued Liability	613,913,079	565,549,812
(3) Surplus: $(1) - (2)$	233,602,592	225,307,910
(4) Contingency Reserve: 10% x (2)	61,391,308	56,554,981
(5) Actuarial Surplus: $(3) - (4)$	172,211,284	168,752,929
Fable 2: Determination of Distributable Actuarial Surplus		
(1) Actuarial Surplus (Table 1)	\$172,211,284	\$168,752,929
(2) Amortization of Balance of Actuarial Surplus:		
a. Amortization Period	15	15
b. Amortization Factor	0.089385	0.087255
 c. Amortization of Balance of Actuarial Surplus (1) x (2b) 	\$15,393,069	\$14,724,537
(3) Projected Surplus for Next Year	\$170,390,682	\$167,343,121
1.0825 x (1) – 1.04125 x (2c):		
(4) Amortization of Balance of Projected Actuarial Surplus:		
a. Amortization Period	15	15
b. Amortization Factor	0.089385	0.087255
c. Amortization of Balance of Actuarial Surplus:(3) x (4b)	\$15,230,355	\$14,601,524

Allocation of Actuarial Surplus

	June 30		
	2006	2005	
Cable 3: Allocation of Distributable Actuarial Surplus:			
(1) Distributable Actuarial Surplus (Table 2)	\$15,393,069	\$14,724,537	
(2) Expected COLA contributions for next following fiscal year (from prior year's Actuarial Report)			
a. City	3,406,000	3,303,000	
b. Members	<u>3,406,000</u>	<u>3,303,000</u>	
c. Total	\$6,812,000	\$6,606,000	
(3) Net Distributable Actuarial Surplus as of date of valuation: (1) – (2c)	8,581,069	8,118,537	
(4) Additional City Allocation: (3) x $^{2}/_{3}$	5,720,713	5,412,358	
(5) PRSB Allocation: $(3) - (4)$	2,860,356	2,706,179	
(6) Next Year Projected Distributable Actuarial Surplus (Table 2)	15,230,335	14,601,524	
(7) Expected COLA contributions for second following fiscal year (from current year's Actuarial Report)			
a. City	3,444,000	3,406,000	
b. Members	<u>3,444,000</u>	<u>3,406,000</u>	
c. Total	\$6,888,000	\$6,812,000	
 (8) Net Projected Distributable Actuarial Surplus as of date of next valuation: (6) – (7c) 	8,342,335	7,789,524	
(9) Additional City Allocation: (8) x $^{2}/_{3}$	5,561,556	5,193,016	

The June 30, 2006 PRSB Allocation (along with the PRSB Reserve Account) is available to provide retirees and beneficiaries as of June 30, 2006 a monthly PRSB benefit as derived in Table 5.

The City Allocation (Items 7a and 9) along with any City Surplus Reserve is available to reduce City contributions for the fiscal year that commences 12 months following the date of the valuation. Table 4 provides the projected City contribution requirements.

The Member Allocation (Item 7b) is available to reduce members' COLA contributions and is currently sufficient to eliminate all member COLA contributions for the fiscal year that commences 12 months following the date of the valuation.

Allocation of Actuarial Surplus

Allocation of Actuarial Surplus

	Jur	ne 30
	2006	2005
ble 5: Calculations for PRSB and PRSB Reserve Account:		
 PRSB Allocation of Distributable Actuarial Surplus (Table 3) 	\$2,860,356	\$2,706,179
2) PRSB Reserve Account (as of Valuation Date)	\$1,782,000	\$946,000
3) Estimated July 1 to December 31 PRSB Payment	<u>\$1,342,909</u>	<u>\$946,000</u>
4) Total amount available for PRSB $(1) + (2) - (3)$	\$3,299,447	\$2,706,179
5) 95% x (4)	\$3,134,475	\$2,570,870
 Number of eligible participants (Retirees & Beneficiaries) 	1,215	1,163
7) Monthly PRSB Benefit for next calendar year	\$214.98	\$184.21
(5) / (6) / 12		
8) Target Monthly Benefit	\$819.00	\$711.00
9) Benefit Shortfall (8) – (7)	\$604.02	\$526.79
 Estimated PRSB Reserve Account as of end of next calendar year: (4) – (6) x (7) x 12 	\$165,039	\$135,344

Under section 2-1853(f)(4)(iii)(2) of the Municipal Code, we understand that the PRSB reserve shall be used to increase the PRSB benefit to the extent necessary to pay the monthly health insurance premium.

Note: The actual, rather than the projected, June 30, 2007 surplus will be used to determine the 2008 calendar year PRSB benefit.

198603v3/09313.002
